

PAUL DENTEH

+1 (346) 448 3426 | nanakwamepaulsons@gmail.com | github.com/NanaPaulson | linkedin.com/in/paul-denteh/

SUMMARY

Detail-oriented cybersecurity professional with hands-on experience in penetration testing, threat detection, and incident response. Skilled in monitoring, analyzing, and investigating security alerts using SIEM and EDR tools to ensure organizational security. Comfortable collaborating with SOC teams to triage incidents, document findings, and strengthen defense strategies. Exhibits strong problem-solving, collaboration, and communication skills to effectively address cybersecurity challenges

EDUCATION

University of South Florida, Master of Science in Computer Science | Tampa, FL May 2025
Ghana Communication Technology University, Bsc Computer Engineering | Accra, Ghana May 2020

EXPERIENCE

Community Dreams Foundation, Cybersecurity Analyst | (Sebring, FL) May 2025 - Present

- Triageing alerts from XDR, EDR, IDS/IPS, and detection platforms, filtering false positives and escalating confirmed incidents for rapid containment.
- Creating and tuning detection rules, correlation logic, and response playbooks to enhance SOC efficiency and reduce response time.
- Assisting in updating security policies, procedures, and incident documentation to comply with ISO 27001, NIST 800, and ISO/IEC 27002 frameworks.
- Participating in security awareness and phishing simulations, strengthening employee cybersecurity practices.
- Applying OWASP Top 10 and CWE standards to guide secure development and mitigate application risks.

EFT Corporation, Payment Systems Engineer | (Accra, Ghana) Aug 2020 - Sep 2023

- Led application configuration, testing, and deployment of ACI payment switch integrations with VISA and MasterCard.
- Administered Thales HSMs and developed cryptographic key management policies aligned with PCI-DSS.
- Conducted system patching, upgrades, and vulnerability remediation based on internal risk analysis.
- Supported VM-based environments and handled backup validations, failover simulations, and DR testing.

PROJECTS

AWS-Hosted Password manager

- Deployed and secured a self-hosted password manager on AWS, applying cloud security best practices for scalability, availability, and reliability
- Implemented HTTPS/TLS encryption and SSL certificate management to safeguard sensitive data in transit and strengthen application security
- Configured domain hosting, IAM access controls, and secure storage practices, enhancing authentication, data protection, and overall system hardening

Vulnerability Scanning with Nessus

- Configured and executed vulnerability assessments with Nessus on Windows systems, identifying and analyzing critical security weaknesses
- Prepared and delivered comprehensive vulnerability reports with actionable recommendations to strengthen overall security posture
- Deployed testing tools and implemented remediation strategies, applying system hardening and robust security controls to reduce risk exposure

SOC Simulator (Tryhackme)

- Strengthened SOC analyst skills by investigating simulated real-world cyber incidents, detecting threats through log analysis, and responding to attacks with SIEM and EDR technologies
- Applied MITRE ATT&CK methodology and threat intelligence tools to categorize adversary techniques and validate IOCs
- Gained hands-on exposure to the workflow of SOC analysts, including alert triage, investigation, escalation/reporting

SKILLS

Automation	Python, C/C++, Java, bash, PowerShell, SQL, Linux
Security Tools	Splunk, Nessus, Wireshark, XDR, Burp Suite, Snort, Hydra, OSINT Tools, nmap, VirusTotal
Operating Systems	Linux, Windows, macOS
Networking	TCP/IP, DNS, VPN, Active Directory, Firewalls
Certifications	CompTIA Security+ CEH Google Cybersecurity CCNA Routing & Switching CCNA Intro to Networks Microsoft Azure fundamentals
