Education

Master of Science in Computer Science, University of South Florida

Aug 2023 – May 2025

Courses: Network Security, Cryptography, Machine Learning, Operating Systems, Network Security, Algorithm

Skills

Cybersecurity & Identity Management: Defense in Depth, Encryption, SAML, OAuth, IDS/IPS, Firewalls.

Networking & Access Control: TCP/IP, DNS Security, VPN, NAC (Network Access Control), Subnetting, LAN/WAN Topologies, Firewall Rule Design, IDS/IPS, OSI Model.

Cloud & Infrastructure: Microsoft Azure (IAM, Security Center), VMware vSphere, Linux, Windows Server, Office 365.

Programming & Automation: Python, Bash, C++.

Customer Engagement: Technical Presentations, Solution Scoping, Training Support.

Tools & Platforms: SIEM (Splunk, Sentinel), XDR, Nessus, Git, Jira, Confluence, REST APIs, CI/CD.

Certifications: CompTIA Security+, Certified Ethical Hacker (CEH), Google Cybersecurity, Microsoft Azure Fundamentals

Experience

Payment Systems Engineer, EFT Corp – Accra-Ghana

Aug 2021 – Sep 2023

- Coordinated internal responses to external audits (VISA, MasterCard), ensuring documentation and evidence alignment with regulatory standards
- Administered Thales HSMs and implemented cryptographic key management policies.
- Automated environment setups and validation tools with Python and Bash, facilitating testing and faster resolution of complex issues.

Cybersecurity Engineer, Margins Group – Accra Ghana

May 2020 – Jun 2021

- Provided consultative support to customers adopting SIEM, endpoint security, and privileged access management solutions.
- Managed and implemented network security controls, including firewalls, intrusion detection systems, and multi-factor authentication.
- Collaborated with internal teams to address audit findings and ensure timely closure of security issues in line with NIST 800-53 and ISO 27001 compliance controls.

Projects

- Password Manager Hosted In AWS Cloud:** Developed and deployed Passbolt, a self-hosted password manager, on AWS cloud services to ensure scalability, availability, and reliability. Implemented HTTPS encryption to safeguard sensitive data during transmission and configured domain hosting to maintain accessibility and security. Enhanced Passbolt's functionality for secure storage of complex passwords, improving both data protection and user convenience
- HoneyPot Hosted in Azure Cloud:** Deployed T-Pot on Azure Cloud by configuring virtual machines and network settings to support its installation and operation, while monitoring and analyzing honeypot data to detect and respond to potential cyber threats.
- Vulnerability Scanning with Nessus:** Configured and executed vulnerability assessments, identified and analyzed system weaknesses, deployed testing tools, and implemented effective remediation strategies with robust security controls and hardening measures on Windows systems; prepared comprehensive reports summarizing findings and recommendations

Volunteering

Knight of Columbus, Council 12956 Tampa

- Actively participate in **Habitat for Humanity** projects, helping build homes for families in need and supporting resale shops to fund charitable initiatives.

Supervisor, USF Recreation and Wellness Center

- Oversaw intramural and club sports programs, ensuring smooth operations, safety, and compliance with university policies
